

Case Study:

Auburn Hills Police Department utilizes TPMS to improve on-road performance

Auburn Hills PD utilizing TPMS technology

The Auburn Hills Police Department (AHPD) in Auburn Hills, Michigan is a well-equipped, highly-trained group of law enforcement professionals dedicated to serving the residents of Auburn Hills. Auburn Hills is located in Metropolitan Detroit and has a population of approximately 21,000. More than 50 Auburn Hills' police professionals respond to 18,000+ calls each year in a continual effort to keep the local community safe and secure.

The AHPD has been utilizing the EZ-sensor™ technology of Auburn Hills-based Schrader®, as part of a tire pressure monitoring trial for one of its fleet patrol vehicles. Since April 2011, EZ-sensor has provided full tire pressure monitoring services to a 2009 Chevrolet® Tahoe, with over 3,400 operating road miles completed.

“Tire pressure monitoring on a vehicle is important. Low tire pressure alert information is a benefit to the City and helps keep a vehicle on-the-road with no delays due to deflated or underperforming tires. Properly inflated tires can save on tread wear and increase fuel economy, saving the City unnecessary fleet costs.”

— Diane Skinner, Fleet Manager, City of Auburn Hills
